Table 4 List of methods of valuation used by the appraised entity

No.	Name of investee	Shareholding ratio	Methods of valuation used
		-	

3. Fixed assets – equipment assets

The appraised entity's fixed assets are mainly composed of land use rights, buildings, machinery and equipment, vehicles, etc. The valuation of land use rights is based on the market comparison method. The valuation of buildings is based on the cost method. The valuation of machinery and equipment is based on the cost method. The valuation of vehicles is based on the market comparison method.

(1) *Market comparison method*

The market comparison method is a valuation method that compares the appraised asset with similar assets in the market. It is based on the principle of substitution, that is, a rational investor would not pay more for an asset than the cost of acquiring a similar asset in the market. The market comparison method is suitable for valuing assets that have a large number of similar assets in the market, such as land use rights, buildings, vehicles, etc.

In the valuation of land use rights, the appraiser selected several similar land use rights in the market as comparison objects. After comparing the location, area, use type, etc. of the appraised land use rights with those of the comparison objects, the appraiser determined the correction coefficients and calculated the market value of the appraised land use rights.

In the valuation of buildings, the appraiser selected several similar buildings in the market as comparison objects. After comparing the location, structure, area, etc. of the appraised buildings with those of the comparison objects, the appraiser determined the correction coefficients and calculated the market value of the appraised buildings.

In the valuation of vehicles, the appraiser selected several similar vehicles in the market as comparison objects. After comparing the brand, model, year, etc. of the appraised vehicles with those of the comparison objects, the appraiser determined the correction coefficients and calculated the market value of the appraised vehicles.

VII. THE IMPLEMENTATION OF THE VALUATION PROCESS

1. The valuation process is divided into two main stages: (I) Pre-valuation preparation stage and (II) On-site verification and evaluation stage.

(I) Pre-valuation preparation stage

- The valuation team first understands the basic situation of the leased property, including the location, area, and use of the property.
- The valuation team then collects and analyzes relevant market data, including the current market price of similar properties and the lease market conditions.
- The valuation team also identifies the key factors that affect the value of the leased property, such as the location, area, and use of the property.
- The valuation team then determines the appropriate valuation method based on the characteristics of the leased property and the available market data.
- The valuation team then performs the valuation calculation and determines the final valuation result.
- The valuation team then prepares the valuation report and provides it to the client.

(II) On-site verification and evaluation stage

- The valuation team conducts an on-site inspection of the leased property to verify the information provided in the valuation report.
- The valuation team then evaluates the accuracy of the valuation results based on the on-site inspection results and the market data.
- The valuation team then provides a final valuation report to the client, including the valuation results and the reasons for the valuation.
